Omar Mohamed Noor

About the Hospital's Patient Records Management System

I developed this project using the following:

- PHP Language
- MySQL Database
- HTML
- CSS
- JavaScript
- jQuery
- Ajax
- Bootstrap
- AdminLTE

and some other plugins/libraries.

The Hospital's Patient Records Management System has 2 types of user roles which are the Administrator and the Staff. The Admin users are in charge of managing the important list in the system such as the list of rooms. They have access to all features and functionalities that the system has. The Staff users have only limited access where they can only manage the list of doctors and patient records.

Features

- Secure Login and Logout
- Dashboard
- Manage Room Types
- Add New Type of Room
- List All Type of Rooms
- Update Type of Room Details
- View Type of Room Detail
- Delete Service Details
- Manage Rooms
- Add New Room
- List All Rooms
- Update Room Details
- View Room Details
- Delete Room
- Manage Doctors
- Add New Doctor
- List All Doctor
- View Doctor Details
- Update Doctor Details
- Delete Doctor Details
- Manage Users list (CRUD)
